TEST-CUTTING TARGET FOR EDGED-WEAPONS PRACTICE**Abstract of the Disclosure**

Embodiments of the present invention are improved targets suitable for cutting with an edged
5 weapon. In an embodiment the target may be a traditional straw mat target held together by a
hydraulic binder composition. In yet other embodiments, the target may be made of multiple layers
of synthetic materials to give different properties. One embodiment is a target with an inner portion
and an outer portion. The outer portion may be selected from a material that gives the appropriate
initial cutting properties while the inner portion provides a cutting resistance. In addition, shaped
10 targets having multiple differing cutting surfaces are disclosed, as is a method for creating a target to
simulate a predefined sequence of cuts.
